

SMALL CHANGE.

BIG IMPACT.

We know that every fixed-base operator must manage waste, and the need to find more economical, environmentally conscious solutions can be challenging. Successful airport waste management has the potential to positively impact airport authorities, customers and the surrounding community at large.

**MORE THAN
6.7MM
TONS OF WASTE
EACH YEAR**

On average, one passenger alone leaves behind ~3.15 pounds (1.43 kg) of trash on an international flight. The International Air Transport Association (IATA) has estimated that this builds up to 6.7+ million tons of trash per year, and this volume continues to grow. To ensure regulatory compliance, the aviation industry needs an on-site, point-of-generation remediation solution for regulated garbage—we have a solution!

The Sterilis Solutions Remediator combines a steam sterilizer and grinder into a single unit, with cloud-based functionality for automating log-in and batch data. In less than 90 minutes and a few simple steps **yellow bags and their contents are reduced to harmless confetti** that can be thrown out in the municipal waste stream, ensuring you meet the 72-hour compliance window.

HOW EASY IS IT?

Just log in, enter the tail number of the aircraft, select the waste type load and push "Start." The icon-based user interface also overcomes language barriers. Compliance related reporting is available on the portal.

Avoid escalating costs of hauling and transporting.

- Meet the 72-hour compliance window with an onsite, point-of-collection regulated garbage waste system
- Realize savings as system quickly pays for itself versus regulated garbage hauling and processing fees
- Sterilize and grind your regulated garbage into sterile trash on site and reduce your waste volume by up to 80%
- Install immediately as system requires no plumbing, drainage or ventilation—220-volt electrical outlet and internet connection are all that's needed
- Avoid downtime with self-diagnose feature that automatically sends an issue report directly to our U.S.-based tech teams
- Choose from purchase and lease options

Reduce liability.

- Eliminate multiple human touchpoints and hauling liability with our portable, self-contained unit, designed for small, medium and large FBOs
- Capture U.S. Customs and Border Protection regulatory reporting data for every load automatically with cloud-based, automated software, and maintain an ongoing log of each disposal cycle to eliminate the need for manual tracking or record keeping
- Receive assistance with the APHIS certification process from our Service Engineers, as well as help with training your staff

CYCLE TIME

75 to 100 minutes depending on the type of waste load, density, and pre-heat condition of the system.

VESSEL WASTE CAPACITY

5 Gallon (19 liters)

DIMENSIONS

36" W x 26" D x 49" H
(914 mm W x 661 mm D x 1244.6 mm H)

VOLTAGE AND CURRENT

220V ± 10%, Single Phase, 60 Hz Circuit
amperage: 30 Amp

MACHINE WEIGHT

936 lbs. (425 kg)

INTERNET ACCESS

CAT-5 Ethernet or WiFi

STERILIZATION PROCESS

High Pressure Steam

WARRANTY LENGTH

One-year parts and labor

UL APPROVED

UL 61010

APHIS REGULATIONS

Meets or exceeds

“We’re a smaller airport and were paying a third-party hauling service ~\$1,000 per pickup. Now, we’re remediating waste ourselves for a few pennies per pound. This has a huge impact on reducing our costs associated with making Customs Clearance available to our customers.”
